

Players response to dynamic difficulty level generation

Researcher: Patrick Kelly – s5615943@bournemouth.ac.uk

Supervisor: Leigh Mcloughlin

The purpose of this study?

The purpose of this study is to see how players react and feel when the level is adjusting to their level of skill. The results will help with changes that may need to be difficulty of enemies and will help with making potential changes to level layout.

Participation

You've been asked to be a potential player of this project due to the varying different of levels of gaming experience being studied to get a good range on the different difficulties.

During participation the participant will spend up to 10 minutes going through the game where how they play, react and feel about the game will be studied. After playing the game they will be asked to fill out a questionnaire about how they felt about the game, then will be asked to partake in an optional discussion.

Participants do not have to take part if they do not want to this is completely voluntary and may withdraw anytime before data is anonymised.

Risks

The participant may experience minor frustrations during the gameplay. However, they may stop playing anytime.

Data collection

Any data collected on the participant will be anonymous; they will be asked what course they're in but information such as names will be left anonymous. The data will be stored privately where the main researcher and supervisor will only have access to it.

Please tick each box to confirm:

- ☒ I have read and understood the Participant Information Sheet
 - ☒ I understand my participation is voluntary
 - ☒ I understand I can withdraw at any time
 - ☒ I understand my data will be anonymised
 - ☒ I agree to take part in this study
